

Cell Phone Antenna Shrouds

Fabricated entirely from pultruded fiberglass (FRP) structurals, these enclosures provide an aesthetically pleasing shroud for cell phone antennas and other electronic gear. Fiberglass has virtually no RF signature, is light in weight so as not to overload roof structural limits and is completely ready to be assembled on site. In addition, the individual fiberglass pieces contain UV protection in the form of resin additives and a synthetic veil. Call Ultra for further information and design assistance.
