## SuperLoc™ Composite Sheet Pile System

Offering a complete line of quality, composite products to the marine industry

SuperLoc™ Composite Sheet Pile System, a fiber reinforced polymer (FRP) composite system, is manufactured by the pultrusion process and is designed and manufactured to provide a solution for deteriorated waterfront structures subjected to the harsh marine operating environment.

SuperLoc™ is an alternative construction material without many of the performance disadvantages of conventional materials such as aluminum, concrete and wood. SuperLoc™ will not corrode, decay or spall, thereby reducing maintenance costs and future replacements. The FRP composite system resists impact, creep, UV and weathering effects better than vinyl (PVC) materials and are easier to install in harder soils.

Ultra Fiberglass Systems is a premier, full service fabricator of fiberglass platforms, ladders, handrail, grating and open stock fiberglass structurals. Call Ultra today for further information and design assistance.
